FACT SHEET

OFFICIAL

This document is to assist in the identification of sporting firearms manufactured both by the Lithgow Small Arms Factory (Lithgow SAF) and Lithgow Arms. These firearms are recorded in the National Firearms Identification Database (NFID) and the corresponding NFID template numbers are listed in this document. The Australian Criminal Intelligence Commission acknowledges the assistance of staff at the <u>Lithgow Small Arms Factory Museum</u> in the production of this guide.

Introduction

The National Firearm Identification Database (NFID) recognises two manufacturers of 'Lithgow' firearms. The Lithgow SAF and Lithgow Arms. Each manufacturing facility is identified in NFID by the unique Australian Gun Code (AGC); the Lithgow SAF being 'LTG' and the Lithgow Arms being 'LTGA'. NFID data sheets are uploaded frequently at https://www.acic.gov.au/our-services/firearms-services#accordion-3

Lithgow manufactured sporting rifles

The Australian Government owned Lithgow SAF commenced production of 22 Long Rifle (22LR) chambered rifles immediately after World War Two (WW2) in an effort to maintain employment of the skilled small-arms work-force who had produced military firearms before and during WW2. Included in this program was the conversion of Short, Magazine, Lee-Enfield (SMLE) No 1 MK III (and variations) military rifles to sporting configuration and chamberings.

Thales Australia manufactured sporting rifles

Operating out of the historical Lithgow SAF facility in Lithgow, New South Wales, Thales Australia (Thales) in 2014 commenced the manufacture of both centre-fire and rim-fire sporting rifles under the name of Lithgow Arms.

Lithgow SAF rim-fire sporting rifles

A total of 228,000 firearms comprising of three different models of single shot bolt-action 22LR chambered rifles were manufactured by Lithgow SAF from 1945 through to 1961.

The Model 1 rifle was first manufactured by Lithgow SAF in 1945 through to late 1947. The rifle was a sole Lithgow SAF venture and was marketed throughout Australia (see Figure 26). Unlike the Model 1A and 1B the Model 1 has no markings which reference Slazenger Australia Pty Ltd. The barrel and receiver are manufactured from the same piece of ordnance steel. The serial number may be stamped on the barrel near the rear-sight, or under the stock, the latter requiring stock removal to view (see Table 3 for serial number information). Of the three single shot rifles manufactured by Lithgow SAF only the Model 1 has the trigger pinned to the stock. Figure 1 indicates the hole in the stock which accepts the trigger axis pin, while Figure 2 and Figure 3 indicate a comparison between the ways in which the trigger assembly is attached to the firearms. Those Lithgow SAF single shot rifles which have had the barrel shortened (thus removing the model markings) may be identified by model by the manner of the trigger attachment.

Figure 3. SAF Slazenger Model 1A and 1B trigger assembly screwed to barrel/receiver

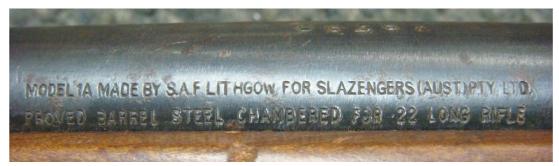

Figure 4. Lithgow SAF Model 1 markings

The Model 1A rifle commenced manufacture in 1947 after Lithgow SAF quoted then Sydney New South Wales (NSW) sporting goods distributors Slazenger Australia Pty Ltd for the initial production of 15,000 firearms. It is estimated that more than 58,000 Model 1A rifles were manufactured. The rifle is unique in that the barrel and receiver are manufactured from one piece of ordnance steel. The serial number is stamped on the barrel near the rear-sight (see Table 3 for serial number information). There is no separate receiver on a Lithgow SAF Model 1A rifle.

The Model 1B rifle was first produced in 1949 through to 1961 by the Lithgow SAF for Slazenger Australia Pty Ltd. This Model was an updated Model 1A. It is estimated that more than 104,000 rifles

OFFICIAL Lithgow manufactured sporting rifles Page 3 of 17

were produced. The rifle is unique in that the barrel and receiver are manufactured from one piece of ordnance steel. There is no separate receiver on a SAF Model 1B rifle. The serial number is stamped on the barrel near the rear-sight (see Table 3 for serial number information).

The Model 12 22LR bolt action repeating rifle was first manufactured by Lithgow SAF in 1947 through to circa 1956 for Slazenger Australia Pty. This rifle was fitted with either a five or ten round curved detachable box magazine. The five round magazines (see Figure 8) have no manufacturer's markings, whilst the ten round magazines have the Slazenger logo and the markings 'Bibby¹¹ Magazine'. The serial number is on the barrel near the rear-sight (see Table 3 for serial number information).

Figure 10. A SAF Slazenger Model 12 fitted with ten round magazine

OFFICIAL Lithgow manufactured sporting rifles Page **5** of **17**

The Model 55 22LR bolt action repeating rifle was first manufactured by SAF in 1955 through to 1960 for Slazenger Australia Pty. The rifle can be fitted with either a five or ten round curved detachable box magazine. The Model 55 has a shorter barrel than the Model 12, with both the Model 12 and Model 55 using the same five or ten round magazine. The serial number is on the barrel near the rear-sight (see Table 3 for serial number information). In May 1958 the Lithgow SAF issued a safety alert for Model 55 rifles with serial numbers between numbers 1 through 3619 in relation to a trigger malfunction issue.

Lithgow Arms rim-fire sporting rifles

The Model LA101 Crossover 22LR bolt action repeating rifle was first offered for sale in 2014 by Thales under the name Lithgow Arms. This rifle is supplied with a five round curved detachable box magazine but will also accept both the five or ten round Czech Republic manufactured CZ-UB ZKM452 rifle magazine. The rifle is also manufactured in 17 HMR or 22 Magnum chamberings as currently advertised on the Lithgow Arms website. The serial number is located on the right-hand side forward receiver. (See Table 3 for serial number information).

Lithgow SAF centre-fire sporting firearms

The SAF Slazenger Model 24 (chambered for the 22 Hornet cartridge) bolt action repeating rifle was first offered for sale in 1949 and ceased in 1960. The rifles were not manufactured by SAF but were conversions of existing military 303 British cartridge SMLE No 1 MK III rifles to the then popular 22 Hornet cartridge. The markings on the firearm are '22 HORNET' on the receiver flat, have Slazenger 24 markings on the side of the barrel, and conversion serial number on top of the barrel.

OFFICIAL

Lithgow manufactured sporting rifles Page **9** of **17**

Whilst SAF re-serialised these converted rifles, the new number was only placed on the barrel assembly, and left the original factory receiver in place. Firearms should be registered by the frame/receiver serial number, as barrel assemblies can be easily removed. If the barrel is removed from a Model 24 that has been registered by the barrel serial number this will leave the receiver without any reference to the serial number placed on the barrel. These, and all other firearms should always be registered by the serial number placed at manufacture on the frame/receiver.

The original Lithgow SAF markings on these converted SMLE No 1 MK III rifles (either the initial 'Lithgow in a Shield' 1912-1926 or the later 'Lithgow MA' 1926-1956 see Figure 23) or those applied by any other manufacturers of the 303 SMLE No 1 MK III rifle will still be observed. The rifle was fitted with a four-round curved detachable box magazine (see Table 3 for serial number information).

Figure 23. Lithgow Model 24 indicating both styles of factory markings and year of manufacture

The 410 conversion from military 303 SMLE No 1 MK III rifles was first introduced in 1949 and conversions ceased in 1960. These converted firearms were sold as 410 Bore bolt action single shot shotguns. Like the Model 24 conversion, these firearms will carry the full range of both SAF and other manufacture markings, including '410 SHOT' on the receiver flat. They will also have Slazenger marking on the side of the barrel, and a conversion serial number on top of the barrel. Many Australian gunsmiths also converted 303 SMLE rifles to 410 Bore, so it is difficult to identify a genuine 'Lithgow' conversion. Like the Model 24, the firearm should always be registered by the manufacturer's name of the receiver and the serial number on the receiver, and not the barrel.

The L1A1 Target rifle is a single shot firearm chambered for the 7.62 NATO (308 Winchester) cartridge and was designed for use in rifle competition managed by the Australian National Rifle Association. Introduced in 1968 with only 134 rifles manufactured, there are documented examples of serial numbers indicating manufacturer through to 1972.

Figure 24. Lithgow SAF manufactured L1A1 Target rifle

Lithgow Arms centre-fire sporting rifles

The Lithgow Arms (LTGA) model LA102 is a bolt action repeating centre-fie rifle fitted with a detachable box magazine and comes in various cosmetic variations. These variations refer to stock style and composition. All variations have the same markings on the receiver.

Recording descriptors of Lithgow SAF sporting rifles

Because both the Slazenger 12 and Slazenger 55 were serialized within their own range it is important that the model of each is recorded at time of registration or identification. The Model 24 and 410 may not have been converted on receivers made by SAF, so always record these rifles by the manufacturers name and serial number found on the receiver of the firearm. If possible also record the year (for Model 24 and 410) (see Figure 23) of manufacture with the model as this will assist the identification process.

Recording Lithgow SAF model 1 serial number prefixes

The SAF Model 1 rifle has been observed with what appear to be numeric prefixes stamped before the serial number. The prefixes are isolated from the main body of the serial number by what is an obvious and clearly visible space (see Figure 27). Table 1 lists those prefixes observed to date by industry sources. Observing the known serial number range in Table 1 indicates that without the prefix being considered, the remaining numbers (1132–21199) fall within the known serial number range for the Model 1 rifle (1–77000). The full serial number, including prefix should be used to register the firearm, without replicating the space within the serial number.
