OFFICIAL

- Victoria had the highest average regional consumption of oxycodone.
- Victoria had the second highest average regional consumption of fentanyl.
- Victoria had the highest average regional and capital city excretion of ketamine.

Note to editors

In accordance with current wastewater analysis conventions, the terms of the contract, and to protect the integrity of the program, the exact locations are not able to be publicly released by the Australian Criminal Intelligence Commission. To maintain the confidentiality of the participating site, each site was allocated a unique code to de-identify their results, however trends in particular states and territories are still able to be identified.
